

Mars life

Student Datasheet ...

- There may be twice as much life on Earth as we thought there was. Why did it take us so long to find out? (Where is it living?)

- Scientists found a rock in Antarctica. How is the rock connected to Mars?

- How do scientists think the rock got to Antarctica?

Something else to think about...

We discovered in 1998 that there may be twice as much life on Earth as we thought. That means we only recently discovered half of all the life on Earth! What does this tell us about science, and about how many things are still left to be discovered?
