

Many Web sites store information on your computer in small text files called “cookies”. This information is similar to an identification card, allowing a Web site to have your preferences.

## Enable Cookies - Windows

1. Click the **Internet Explorer** icon to open your Web browser.
2. Click **Tools** on the toolbar.
3. Click **Internet Options** in the drop-down menu.

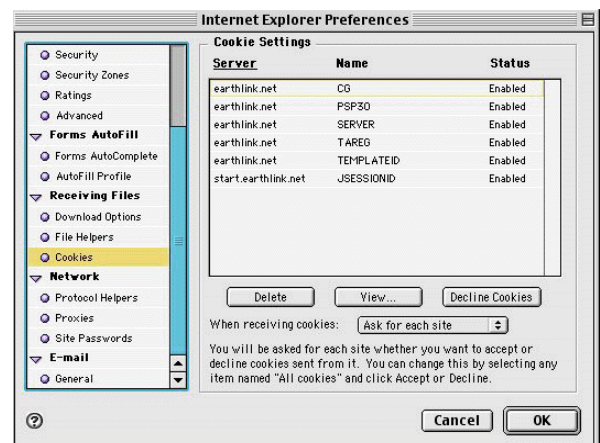

4. Click the **Privacy** tab.
5. Set the **Privacy** setting at **Medium** or **Medium High**. If your setting is not at one of these settings, use the slider to select the level.
6. Click **OK** to accept the setting.

## Enable Cookies - Macintosh

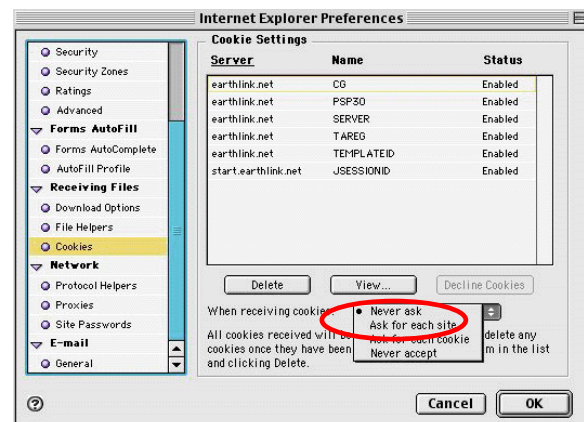

1. Click the **Internet Explorer** icon to open your Web browser.
2. Click **Edit** on the toolbar.
3. Click **Preferences**.

4. Click **Receiving Files**.
5. Select **Cookies**.

6. Click **When receiving cookies** drop-down list and select **Never ask**.

7. Click **OK** to accept the setting.
